

PRACTICA 5 VISTAS

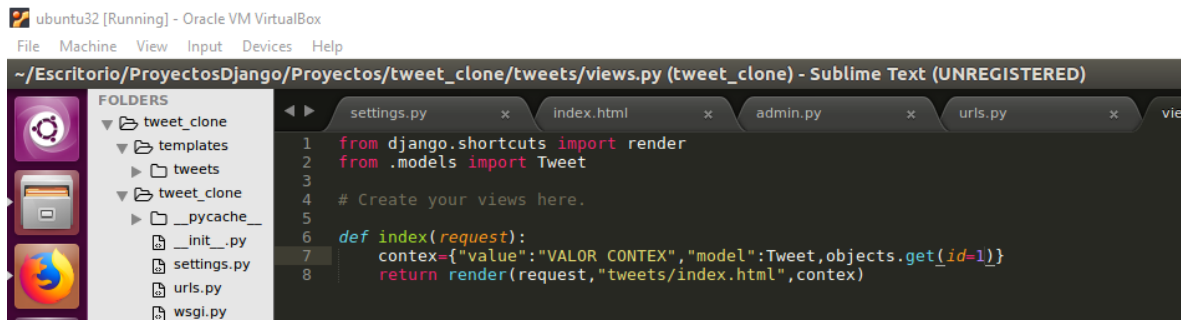

Me voy al archivo views y agrego un diccionario, para que este aparezca en el html

Coremos el servidor y Entramos al localhost en el navegador

Ahora vamos a importar un objeto y lo vamos a mostrar.

The screenshot shows the Sublime Text editor with the file `views.py` open. The file is located at `~/Escritorio/ProyectosDjango/Proyectos/tweet_clone/tweets/views.py`. The code in the file is as follows:

```
1 from django.shortcuts import render
2 from .models import Tweet
3
4 # Create your views here.
5
6 def index(request):
7     contex={"value":"VALOR CONTEX","model":Tweet,objects.get(id=1)}
8     return render(request,"tweets/index.html",contex)
```

Lo agregamos al html

The screenshot shows the Sublime Text editor with the file `index.html` open. The file is located at `~/Escritorio/ProyectosDjango/Proyectos/tweet_clone/templates/tweets/index.html`. The code in the file is as follows:

```
1 <h1>Hola Mundo</h1>
2
3 <h3>{{value}}</h3>
4
5 <h3>{{model}}</h3>
```
